

Grizzly-200

All-terrain CPT cabin truck

Geomil
equipment

*World's first manufacturer
of CPT equipment*

Geomil Equipment B.V. has come up with a new and universal concept for a fully ballasted all-terrain 200kN CPT sounding truck: the Grizzly-200.

The standard Grizzly features consist of:

- a turn-key operation concept, giving the most attractive financial conditions;
- client demands or site specific modifications can be incorporated at a reasonable cost;
- CPT installation (load bearing sub-chassis construction, hydraulic system for jacking and static push, PLC based control unit, working cabin and respective interior) can be mounted on nearly any heavy duty, three axle truck regardless of the truck brand and only complying to some minimum demands;
- production time is cut substantially and a great variety of base trucks can be used as carrier;
- expensive long distance or overseas truck shipments to and from the Geomil production facility are avoided.

If you, the customer, prefer a locally available base truck, Geomil Equipment B.V. will require just some basic technical information in order to verify the conversion feasibility.

Whether the new or second hand base truck is procured from Geomil Equipment B.V., supplied to Geomil by the customer or made available at the client's location, the ready-to-go and pre-assembled Grizzly concept can be deployed anywhere. Is this of interest to you? Then contact us at Geomil for more information, technical details and base truck requirements or for a turn-key or customised quotation.
